**Human can have inverted data at the time of birth about passed way of ancestors as well as about his personal life „scenario” on the way to go along descendants. (Critical Care Medicine Institute, Tbilisi, Georgia).**

Here is a data about predicting the future. that in most cases humans can predict the future: healthy representatives Besides genes of “general usage” there are the ones for only “genes for a person” and the genes “of general usage” which were necessary for his ancestors are out of date and suppressed. So according to the “scenario” of certain persons the difference in between the genes: which ones must “rest” and which of them must “work” and in what time and environment. of medical personal and chronic patients when last mentioned were not in coma but had critical condition. By the way of hypothesis here is said that there is a possibility of travelling in the future of in the past.

**Key Words:** life, Death, Future life. Genome,

**Introduction:** Humans always wanted to know about the future. In addition there is a great interest in passed way by our ancestors. Besides satisfaction of the interest, humans will be able to avoid future mistakes by means of past experience. This will also maintain the progress of civilization and will make easier to solve many problems. It should be noted that mankind have a lot of information about this issue. But it is considered that ability of “recovery” of the past and “predict” the future is a fate of a few persons. It requires a special talent. This work is a first attempt to popularize those persons who were represented as staff of the critical care medicine. From this point of view it is significant that these possibilities and abilities were evaluated in patients with critical condition. In order to simplify the perception these work is answering on questions.

- **what is life?**- life is genetically determined as function of substance that is produced over and over.

- **What are forms of life?**- life forms include: “old or independent life” and “associated” life; by it own the last one can be divided by “invalid’s life”, “life of psychically disorder person” and “new or vegetative condition” and “newest life or critical condition”. Existence of associated life is possible by means of taking care by other life. Moreover, existence of critical life is achieved by means of special working devices and stuff of special level which work in adequate environment. It Is not excluded to create new forms of life in the future.

**What is a “scenario” of life?**- life scenario is an information “placed” in human genome which is transferred in child organism at the birth-time by means of parents’ sexual or somatic cells’ DNA molecule’s certain chains. Consequently person carries on the program of death and life simultaneously. It is obvious that in this molecule of DNA there is recorded defining information about a person’s psychic, physical and intellectual characteristics but in developing these abilities environment, family, society, economic, social-political and other factors and conditions make sense too. Finally all these above create a story of life in which a person takes place. Consequently in order to have those characteristics and abilities, a person must be supported by the environmental conditions of life. This would be easier if besides personal characteristics there are also “scenario” of live that a person must “play” in human genome. Besides the future “scenario” there must be passed life of his ancestors. The case is that this genetic apparatus he gained from ancestors and he is obliged to give it to posterity. After Lilith left Adam Eva was created in order to be a companion for life. Eva became a part of Adam and it was difficult for her to leave him. Consequently after creating Adam, the first citizen of civilization including the last citizen pathetically named “hao”, may be carry the genetic apparatus with information of the whole humankind. Besides genes of “general usage” there are the ones for only “genes for a person” and the genes “of general usage” which were necessary for his ancestors are out of date and suppressed. So according to the “scenario” of certain persons the difference in between the genes: which ones must “rest” and which of them must “work” and in what time and environment. But creating of Eva by means of vegetative way generated a problem. We consider the Y- chromosome that determines male gender of Adam. This chromosome is so “tired” that it will lose function in near centuries. This surplus of suppression maybe is

supported by physical and psychological tiredness which is characteristic for everyday routine of males life. This tiredness will be increased if we consider males' role in wars and other activities. This weakness of Y-chromosome is fixed and noted in sub-consciousness, this is not by chance: nowadays in every language, in Georgian too, we use the word "awesome" in order to explain something good-good woman-awesome woman, good food-awesome food, good painting-awesome painting, and so on. Everything that is good and the best is awesome. So subconsciously humans.

**What indicates on existence of "life scenario"?**- the fact that past life is recorded in human genome is not a surprise. From this viewpoint we would be more surprised if it did not existed. Each second human after Adam is an actual copy of him. If in the genome of Adam and Eva there were fixed "scenario of there life", it is evident that in genome of the present mankind there is an information about ancestors' life. We suppose that "copying" of this information occurs in some certain structures of and is saved during a life. Are there any places in human genome which contain the future way that a person must pass, may be they also are sagged in our sub consciousness. If we admit that from Homo Sapiens or "clever human" until the last "hao" there was created the same genome this make possible to think that is gives a chance to know not only future of this person but hit posterity. This consideration some kind is a confession of universe's end. Consequently besides past civilizations our one can disappear too. If the each member of civilization will die why there is not limited time for the whole civilization? For this reason we can suppose that Adam and "hao" received the similar genomes but in case of Adam there were implemented the first steps of civilization and in case of "hao"- the final steps of humankind.

**Is it possible to determine the information of "life scenario"?** probably it is. In this world there were so many "predictors" that is it impossible that no one were near the truth. The pretension may have Nostradamus, Vanga and etc. the beginning of this activity started from Medea anyway. It is important that the name "Medea" who was a daughter of Kolkheti's king, is associated with two very difficult activities : Medea-cine and Medea-tation. Moreover, these activities may had the same basis and after some time they were separated. This was important for the further development of each direction. Argonauts who came in kolkheti did not wanted golden fleece to be kidnapped because it seems that things that Medea knew and take from golden fleece according to the rules "recorded" in it, was possible by means of love. So, in order to the proper usage of golden fleece, Argonauts need Medea in love and they managed it. Though those must be means and abilities free from conscious's influence. The possibility to consider this are conducted works by our institute which indicates the fact that in most cases humans can predict the future: healthy representatives of medical personal and chronic patients, accordingly with 65,0 and 63,0 percent were able to predict the forecast, results of football match,

likelihood of surviving of patients in clinic and so on. From this point of view the most significant is that these data was predicted right in 77,0% by critical patients which were in syndrome of “end’s beginning”, had picture of encephalopathy and free sub-consciousness because of suppressing of consciousness. It should be noted that the fact of predication is seen during meditation, praying and the similar activities which are marked by growing of sub-consciousness. The significant aid can have dancing, singing and such activities so that to reach this ecstasy; we may reckon that “Georgian Ballet”, known all over the world, carried such function. The same is about Georgian folk music like “Krimanchuli”. These considerations become more realistic if we consider the influence of canticles and classic meditational music in treating patients in critical conditions, namely, such alteration in brain blood circulation and electric activation that creates actuality of using music tunes with such patients.

**What possibilities gives a knowledge about “life scenario?”** - first of all it gives chance to analyze ancestors passed life and their mistakes. By means of it it will be easier to avoid problems in future. It will be simpler if we know our future. The one who knows the past is strong and who knows the future is the strongest. In this case the problem is if we can change a “life scenario” or make corrections in it? We must consider that genous therapy by the way of genous engineering will give possibility of removing undesirable passages as we want. From this point of view representatives of Homo Sapiens must change the final of “scenario”. It makes practicable to save the civilization.

**Conclusion:** on the primary stages of critical conditios there occur activation of subconsciousness and suppression of consciousness that is association with strengthening of predicting the future in critical patients. The possibility of having humans the genome which includes information about their ancestors passed life and the future of posterity is a hypothetical character and needs further researches.
